

KOSTAT-UNFPA Summer Seminar on Population

Workshop 1: Demographic Analysis: Methods and Tools in R

1 July, 2024

Instructor: Tim Riffe

Assistant: Inchan Hwang

Universidad
del País Vasco

Euskal Herriko
Unibertsitatea

ikerbasque
Basque Foundation for Science

Statistics
Korea

Objectives

- (1) Fundamental demographic concepts and measures

$$nq_x = \frac{n \cdot {}_nM_x}{1 + (n - {}_nA_x) \cdot {}_nM_x}$$

$$r = \frac{\ln\left(\frac{N(T)}{N(0)}\right)}{T}$$

- (2) Basic R coding skills for demographic data analysis and visualization

```
KOR2014 |>
  filter(sex == "total") |>
  mutate(nMx = deaths / exposure,
         nAx = if_else(age == 0, .1, .5),
         n = 1,
         nqx = calc_nqx(nMx = nMx, nAx = nAx, n = n),
         lx = calc_lx(nqx = nqx)) |>
  ggplot(aes(x = age, y = lx)) +
  geom_line() +
  ylim(0,1) +
  labs(title = "lx Korea, 2014",
       subtitle = "Data: HMD") +
  theme_minimal()
```

Workshop plan, 1-5 July, 2024

- | | |
|--------------|-----------------------------|
| 1: Monday | Intro concepts, and R setup |
| 2: Tuesday | Mortality and fertility |
| 3: Wednesday | Structure |
| 4: Thursday | Growth |
| 5: Friday | Projection |

Statistics
Korea

Population:

the collection of persons alive at a specific point in time who meet certain criteria

Preston et al (2001)

Demography:

“Demography is the science of populations. Demographers seek to understand population dynamics by investigating three main demographic processes: birth, migration, and aging (including death)”- MPIDR

“The study of statistics such as births, deaths, income, or the incidence of disease, which illustrate the changing structure of human populations”- Oxford dictionary

“Demography is the study of the size, territorial distribution, and composition of population, changes therein, and the components of such changes” - Hauser 1959

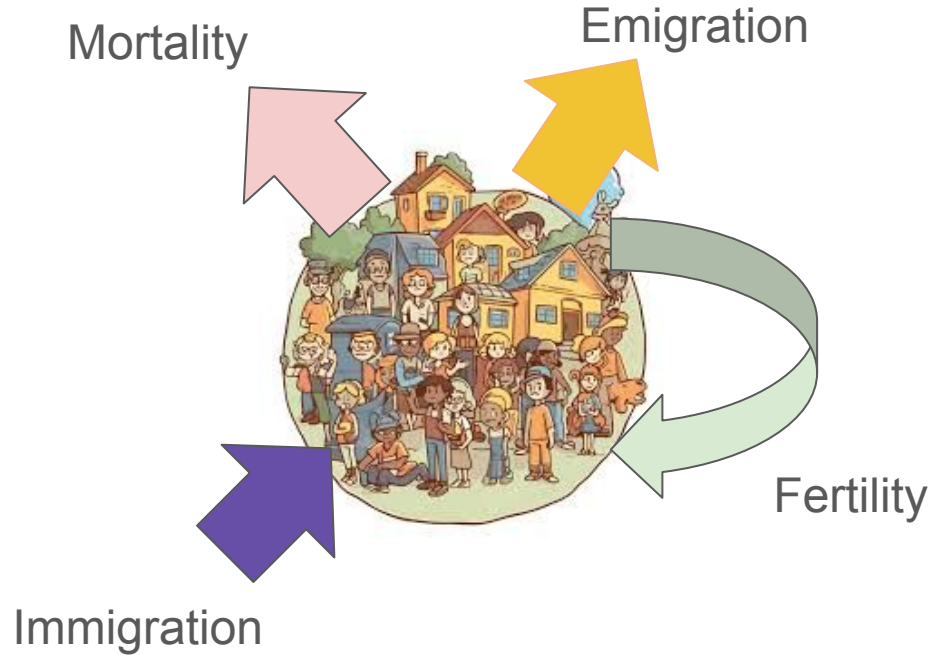

Demographic flows

Demographic flows

Demographic flows - scale matters

Demographic flows - scale matters

Mortality

Demographic flows - structure matters

FIGURE 5 Age-specific conditional first birth rates (m1) by level of education, among women ages 15–45 in Chile (2002) and Brazil (2010)

(Lima et al 2018)

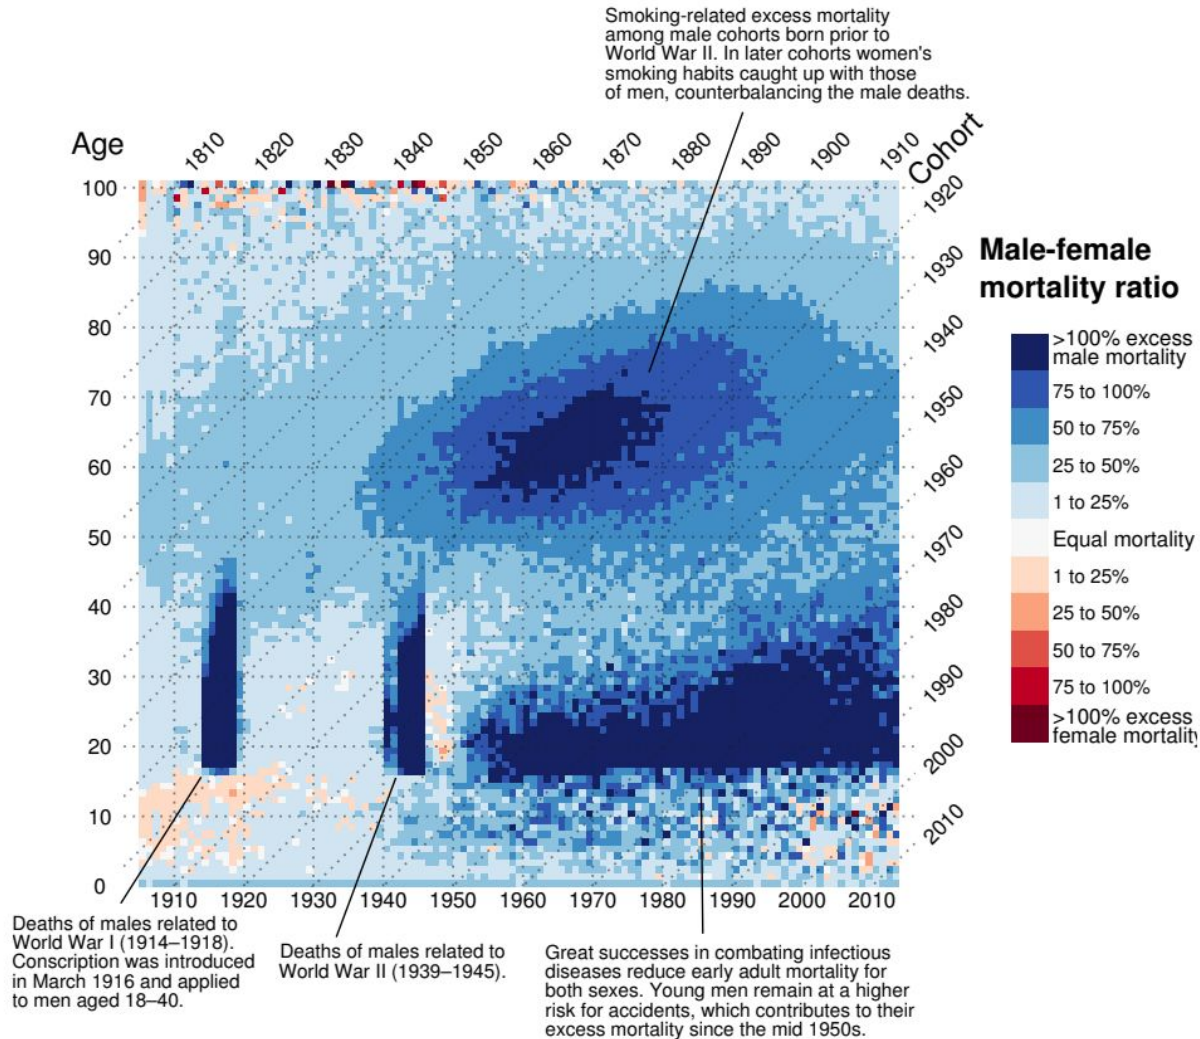

Time as structure

The Lexis diagram relates the dimensions of **age**, **period**, and **cohort** on a single plane.

Time as structure

“Lexis surface” with features in the **age**, **period**, and **cohort** perspectives. From Schoeley & Willekens (2017)

Probabilities vs rates

$$\textit{Probability} = \frac{\textit{Number of Occurences}}{\textit{Number of preceeding Events or trials}}$$

$$\textit{Rate} = \frac{\textit{Number of Occurences}}{\textit{Number of person - years lived}}$$

Probabilities vs rates

Crude rates

Korea 2014 data

E: 50,765,887 (HMD estimate)

B: 435,435

D: 267,692

CDR(2014) = $D / E = 0.00527$ or 5.3 per 1000

CBR(2014) = $B / E = 0.00857$ or 8.6 per 1000

Age-specific mortality rates for Korea (total population, 2014)

Age-specific mortality rates for Korea (total population, 2014)

Time for us to move to R!
